CONCEPT

Brooklyn Partition System

Brooklyn / Georgian bars are used to add atraditional or colonial aesthetic to partitions, reminiscent of the multi-paned windows popular in Georgian and Victorian architecture. They are often employed in both residential and commercial buildings.

Brooklyn bars come in various designs, including horizontal and vertical arrangements, as well as variations in thickness and profiles. These variation sallow for customization based on the architectural style and design preferences.

While Georgian bars are primarily decorative, they can also create the illusion of separate glass sections, adding a touch of classic elegance to a space. Architects opt for Georgian bars for their historic or architectural significance.
